## WiFi Controls for Carrier Ductless Splits

Carrier ductless split systems now offer options for your homeowners to control their system remotely.

### Thermostat Interface

Carrier Comfort Series and Performance Series 1:1 systems can use an interface module allowing any 24-volt thermostat to control the system. Unlike other brands with a similar interface, the Carrier module won't limit an inverter system to two-stages. You can offer homeowners precise temperature control and the convenience of the C<sup>o</sup>r or similar thermostat.

KSAIC0101115 - \$134

Interface Kit for 115-Volt Systems

KSAIC0101230 - \$134

Interface Kit for 1:1 230-Volt Systems

### Sensibo Inside

Maybe your homeowner doesn't want any thermostat on the wall. Carrier has partnered with Sensibo to allow the Performance Series ductless systems to be controlled with the Sensibo app. The app allows homeowners to create a

weekly schedule, timers, and fan speeds. Basically everything that could be done with the remote control is now done on a smart phone.

Another advantage of Sensibo is that it can be used to create a GeoFencing perimeter around the home. The system can turn on automatically when the homeowner is near their home, or notify them if they left the system on and are no longer in the area.

A Sensibo connected system is also smart, collecting and analyzing data to improve energy efficiency of the equipment and give superior comfort to homeowners.

SEN-INS-CAR-0805 - \$75

Sensibo for 40MAQ Highwall Fan Coils

SEN-INS-CAR-1005 - \$75

Sensibo for 40MBQ Cassette,  
Ducted and Floor Fan Coils

The Sensibo app is highly rated and available for download for free on iTunes and Google Play.

## Featured Products

Since the company began in 1924, Milwaukee Tool has led the industry in both durability and performance. With an unwavering commitment to the trades, Milwaukee continues to lead with a focus on providing innovative, trade-specific solutions. Whether it is through their leadership in LITHIUM-ION technology, time-saving accessories or innovative hand tool products, Milwaukee is dedicated to delivering a steady stream of advanced solutions for the HVAC industry that offers increased productivity and unmatched durability.

Sigler Wholesale Distributors is proud to carry a large line of Milwaukee products. With more than 40 different products in stock today, you're sure to find what you need to make the job easier.

Sigler Wholesale Distributors now stocks the full suite of Nest products. In addition to the popular Nest Thermostat with a sleek design and ability to learn and program itself, check out the Nest Protect smoke and CO alarm. It looks for fast-burning fires, smoldering fires, and carbon monoxide. It also speaks up when there's a problem and sends an alert to your customer's phone in case they're not home.

The Nest Cam Indoor and Nest Cam Outdoor helps your customers see their home on their phone. They offer 24/7 live streaming, no dead batteries and intelligent alerts with Nest Aware.

In August, save some money when you bundle Nest products together:

**Thermostat + Smoke/CO**  
**Save \$25**

**Thermostat + Smoke/CO + Camera**  
**Save \$50**

## Technical Tips

### Q: Customers are requesting ductless splits, what should I know?

Unlike most conventional split systems, ductless systems typically run the fan continuously when in an active 'mode'. For most this is not a problem, but for sleeping quarters it can be an issue if not explained.

Much like conventional systems, bigger isn't better. Most ductless splits will have minimum run times as part of the control algorithm. An oversized system will cycle and overshoot, leaving a customer wondering what type of comfort they purchased.

Wiring seems simple enough, L1, L2, and Signal. However, the number one call that comes in to tech support is

"communication error" caused by faulty field wiring. The wiring is polarity sensitive, so double check it.

No 'winging it' with the refrigerant charge. Systems provide a factory charge for a certain length of pipe, and then there is an adder for additional length in the installation manual. Weigh in the additional charge and note how much refrigerant was added at installation inside the control box.

Some homeowners prefer a traditional thermostat instead of a remote control. Most one-on-one systems have an interface kit that can be used for this, but the multi-splits may not.
