Carrier 90% Furnaces are Easier to Install

The Carrier engineers have been working overtime to make the "90% furnaces 100% easier!" Here is list of all the improvements that have been made to Carrier's family of 90% furnaces:

Control Boards – Co-designed by furnace and controls engineers that is not an off-the-shelf solution.

Bottom Closure – Easily removable with two screws while still maintaining <2% cabinet leakage.

Wiring Harness – Extra-long so you can remove the blower assembly.

Top Panel Insulation – Modified to create a more flush fit for the coil and pre-cut insulation for top entry of utilities.

Inducer Gasket – Changed to a more robust material resistant to sulfuric acid.

Gas Valves – Raised pressure ports for easier to check inlet / manifold pressures.

Hose Clamps – Elongated arms makes it easier to install.

Power Choke – Added to 59SP five ton models for more airflow while maintaining 15 amp circuit breaker.

Condensate Trap – Translucent front so you can see problems while minimizing nuisance calls from homeowners.

Heat Exchanger – Robust design with over 500,000 lab test cycles (equivalent to about 50 years of use)

DIP Switch Reference – Faster access to information for setting proper airflows.

Door Knobs – Improved movement for better sealing of the doors.

Rotating Elbow – New material for a faster and easier installation.

Accessory Literature – Kits applied to older furnaces have been updated with easy-to-follow instructions.

Door Switch – More robust and allows for a 100% true and tight fitting door.

Featured Products

Sigler Wholesale Distributors is excited to be partnered with the premier brand of whole house fans in the market, QuietCool! Check out the 2018 edition of the Supply and Installation Accessory Reference Guide. Page 46 has pricing of all the in-stock whole house fans.

- Stealth Pro with ECM Motor
- Trident Pro with PSC Motor
- Attic Gable Fans

Both models of whole house fans have an industry leading warranty, removable egg-crate grille, an R5 insulated damper. Check out the demo systems in all three Bay Area Sigler Wholesale Distributor locations!

In the Bay Area, Sigler Wholesale Distributors has more than 450 T-bar grilles and registers in stock for your next project.

- 825CB – Curved Blade Diffusers
- HVD – High Velocity Diffusers
- 830 – Return Air Grilles

Check out the 2018 edition of the Supply and Installation Accessory Reference Guide. Page 20 has pricing of all the in-stock commercial products.

In the month of February, you'll save more when you buy more. With an order of 10 commercial diffusers or grilles, you'll get 10% the order! With an order of 20 commercial diffusers or grilles, you'll get 20% off the order!

Technical Tips

Q: What should I know about the new –B Infinity control??

The new –B Infinity control has a built in occupancy sensor that comes from the factory “enabled”. It is used to shift a system in to “away” mode if the home is unoccupied, or shift the system to the “home” mode if occupied during a scheduled away mode. The sensor is able to detect motion 25 feet directly in front of the sensor, and within a 135° cone perpendicular to the wall.

As a technician, you need to be aware of the fact that even though a system is scheduled for a certain activity, the occupancy sensor can override the scheduled setpoints and display something different than what would otherwise be anticipated. The

occupancy sensor function can be reconfigured to “disable” via the sensors menu.

The second thing that is different is the USB port was replaced with a microSD port. The port is used for entering your company contact information and updating software on controls that are not attached to the internet. Over the air software updates will take place on controls connected to the internet. It is recommended that a microSD card of 32GB or smaller be used, and be formatted as FAT32. The process for entering you dealer information is the same as the previous control, just a different piece of hardware required.
