

## Up To Date

### FER Furnace Transition

*The inventory of non-FER furnaces continues to dwindle. Please make sure you're checking stock before quoting your customer. Most of the old ECM models have been depleted, but several of the old PSC models and sizes are still available.*

### Personal Use Program

*Do you have firsthand experience with Carrier's newest top-tier products? Their Personal Use Program is a great way to get equipment for your home at an incredible discount.*

### Refrigerant Pricing

*Refrigerant prices have stabilized...check out the current pricing:*

- R-407C \$119
- R-410A \$119
- R-422B \$209

### Labor Day

*Sigler Wholesale Distributors will be closed on Monday, September 2.*

An installation with Carrier's Infinity Series high-wall ductless split system

## Carrier Ductless Split System Controls

Carrier's new 24-volt interface kit for multi-zone systems is now available! This addition now completes the controls lineup for Carrier ductless split system. But what options does a homeowner have? Most Carrier ductless fan coils include a handheld wireless remote control inside the box. When that's not going to satisfy the needs of your homeowner, several other options are available:

### 7-Day Programmable Control

This control is the easiest solution when the homeowner wants a wall mounted control for their system. Two models are available, one for high-wall system (KSACN0401AAA) and one for all other system types (KSACN0501AAA). Note, the ducted models include this control in the box along with the handheld remote.

### Thermostat Interface Kit

Unlike most interface kits available for other brands, this product allows full inverter operation with any thermostat. This is the easiest way for a homeowner to get WiFi access with their system. One model is available for all 230-volt systems (KSAIC0301230). Unfortunately, the old kit for 115-volt systems is no longer in production.

### Carrier CliMate

Homeowners can access their system directly with the CliMate app available on most app stores. This kit is factory installed on the Infinity high-wall systems and several different kits are available for all other systems types (KSAIF0101AAA, KSAIF0201AAA and KSAIF0301AAA).

## Featured Products

Sigler Wholesale Distributors now has the popular REME HALO in-duct air purifier in stock. This exciting IAQ device is installed in the supply plenum and it adds Hydro-Peroxide plasma into the air stream. Unlike other air purifiers, the plasma attacks odors and pollutants at their source. Plus, the charged plasma induces particles to stick together making them bigger and easier for the filter to catch.

Does it sound nasty? Hydro-Peroxides occur naturally in the earth's atmosphere and are part of nature's process of cleaning the air.

REME-H

Sigler Wholesale Distributors is proud to stock sheet metal components made by Air Duct Products. ADP has been in business for over thirty years. Originally located in Fullerton, the manufacturing facility continues to grow as larger, advanced equipment is acquired and better manufacturing is developed. Now located in Corona, Ca. – their 8 acre facility strives to create the highest quality product and meet all shipping needs.

While ADP is committed to providing quality products, Sigler Wholesale Distributors is committed to having the items you need with market competitive pricing. Check out the pricing and inventory on alumaflex, spiral pipe, elbows, wyes, collars, dampers, ceiling boxes, register boxes, drain pans, wall caps, flat stock and more. Additionally custom products are available with lead times often less than a week. ADP has a full design staff who can help assist with drawings to transform your sketches into a finished product.

## Technical Tips

### Q: Any problems replacing an old Infinity outdoor unit with a new model?

First thing to know is that the latest Infinity outdoor units only require 2 wires from the indoor to the outdoor section. Older products required 4 wires, 2 for communication and 2 for power. With the new outdoor units there is a transformer in the outdoor unit powering the board, so only the 2 communication wires are required. The indoor unit designation for the communication is A = GREEN, B = YELLOW. The new outdoor units come with a green plug connector on the board, and GREEN and YELLOW wires connected waiting for wire-nut connections. GREEN from indoor to GREEN at outdoor, YELLOW from indoor to YELLOW at outdoor,

regardless of the wire color in the cable from indoor to outdoor.

Just as important, is making sure the existing User Interface is compatible with the new outdoor section. If you are installing a variable speed or 5-stage unit, the UI must be a Touch device with the latest software – old push button UI's will not work with the variable and 5-stage machines. Older style push button devices with software version 10 or later will work with 2-stage machines. The latest –B UI will work with all combinations. Information for upgrading software on older Touch devices can be found at [www.SiglerTV.com](http://www.SiglerTV.com).
