Adonis Segrove with his family at the CHoNC Pediatric Hospital.

## Candy Bar Community Fundraiser

In 2011, Adonis and Candace Segrove drove home from the hospital with their new baby boy. Edmond seemed to be a healthy baby and the first few months went well for this new family of five.

While at his scheduled 3-month check-up with the pediatrician, Edmond began having a seizure. He was immediately sent to the hospital, and after a series of EKG and MRI tests, Edmond was diagnosed with a severe brain disorder. The diagnosis was Lissencephaly, which literally means "smooth brain." It is a rare brain malformation where the normal folds in the brain don't form. There is no cure and most children with the disease will not develop mentally past the age of 3 to 5 months.

Life in the Segrove household changed dramatically. After finishing his work day at Sigler Wholesale Distributors in South San Francisco, Adonis would come home and help take care of Edmond. He and Candace gave him all of his medications and completed all of his treatments. Adonis described his home as like a "mini-hospital." Edmond required constant

attention which they gave at the same time as raising two other children.

After six years as Edmond's primary caregivers, Adonis and Candace found the Children's Hospital of Northern California (CHoNC). This specialized pediatric hospital provides acute care services for catastrophically injured and severely disabled children. Edmond now gets 24-hour care at CHoNC that is tailored to his specific needs. Edmond's doctor originally said he would never live past 3 years old, but Edmond recently celebrated his 8<sup>th</sup> birthday with his family!

This month, Sigler Wholesale Distributors is proud to support the Children's Hospital of Northern California. In Concord, San Jose and South San Francisco, we will be selling See's Chocolate bars for \$3 each or 2 bars for \$5. Because of a generous donation by Sigler Wholesale Distributors, 100% of your purchase price will go directly to CHoNC and the families they serve.

For more information about this charity, check out [www.chonc.org](http://www.chonc.org).

## Featured Products

### Infinity Touch

The Carrier Infinity Touch Control is now available in white!

**SYSTXCCWIC01-B**

Like the original black model, this smart control takes full advantage of the best technology Carrier has to offer, including Greenspeed technology and Hybrid Heat system management. The Infinity System Control can manage humidity levels, airflow, ventilation and indoor air quality from anywhere with a connected smartphone or tablet. It's also compatible with Amazon Alexa. Simple, powerful and convenient, the Infinity System takes your customer's comfort to the next level.

Sigler Wholesale Distributors now stocks the ADP dedicated downflow coil. This is the perfect solution for all of your downflow closet applications. A spacer is no longer needed because this coil is designed to ensure condensate won't blow off the coil and airflow through the coil is more uniform. Like other ADP products, this coil has a 10-year limited parts only warranty to the original homeowner.

## Technical Tips

**Q: I'm going to install a 24 volt interface on a ductless, is it plug and play?**

Yes and no. The wiring aspect of the device is pretty straight forward as it is the junction point for the L1, L2, and S wires of the system.

L1, L2, and S from outdoor to the interface, then L1, L2, and S from the interface to the indoor unit. As it is with systems that do not use the interface, the polarity of the wires is important and must not be criss-crossed (i.e. don't let the smoke out).

There is a separate terminal block for the 24 volt thermostat connection which consists of R, C, Y, W, and G. Thermostats should be configured for standard system operation, not a heat

pump.

Then there are some dipswitches. SW1-2 must be set to "ON" for ductless systems, it comes factory defaulted to "OFF" and must be changed at install. SW3-2 determines the rate of change for maximum frequency of the system and is factory set to "OFF" for efficiency. However, this can be changed to "ON" resulting in a quicker response for those homeowners that do not schedule the thermostat.

The remaining dipswitch factory default settings won't need adjustment, but should be verified prior to power-up for proper operation.
