## Fight the Smoke with an Air Purifier

Homeowners who are sensitive to smoke from nearby forest fires may benefit from an in-room air purifier. Sigler Wholesale Distributors has two great products in stock and ready to go!

**FSP900**

The CinQuartz from Five Seasons is a portable true HEPA air cleaner that offers the ultimate in air filtration and sterilization. This patent-pending combination uses HEPA, UVC Germicidal Light (non ozone producing) and Photo Catalytic Oxidation. It removes and destroys allergens, lung damaging atmospheric dust, biological and chemical contaminants and odors, such as formaldehyde, toluene, benzene, cooking odors, tobacco smoke, bacteria, viruses, mold and lots more. It is ideal for residential and light commercial

applications where there are allergy, asthma or respiratory sufferers, new construction odors, smokers, pets, cooking odors, mold, water and sewer damage.

**HEALTHPROPLUS**

IQAir took their industry leading technology found inside the Perfect 16 whole home air cleaner and moved it into the Health Pro Plus. Their HyperHEPA filtration is proven and certified to stop airborne pollutants that ordinary HEPA filters simply cannot. One of the best testimonies for this product is a video where the president of the company spent ten minutes inside a gas chamber filled with noxious smoke, breathing only the air filtered by the Health Pro Plus. Check out the video on [www.SiglerTV.com](http://www.SiglerTV.com) and click on "What's New."

## Featured Products

Sigler Wholesale Distributors now has the Cozy Challenger Floor Furnace in stock. This popular model for replacement applications provides even heat throughout the house because of the natural convection of circulating warm air.

The Cozy Challenger features a factory-mounted control with built-in pressure regulator and 100% safety pilot. The millivolt controls require no electricity to operate, so losing heat during a power failure is never an issue. The combustion chamber has continuous-seam welded steel and is warranted for 10 years.

90N30 and 90N50

Founded in 1937, RectorSeal started as a manufacturer of specialty chemical sealants. One of their first products, RectorSeal Number 5, became a staple of the plumbing industry, becoming the most common thread sealant throughout the U.S. Since these beginnings, they have continued to grow by expanding their offering of chemical and mechanical products to support the tradesman in their work.

RectorSeal's growth has centered around a simple mission: To provide innovative solutions to the professional trades. They want to help professionals in the heating & cooling, plumbing, electrical and construction industries perform their work faster and with greater reliability.

Sigler Wholesale Distributors is proud to represent RectorSeal. During the month of September, take 10% off your purchase of FlareTite, PRO-Fit Quick Connect, Safe-T-Switch, AC Leak Freeze, Goliath pans or No 5 Thread Sealant products.

## Technical Tips

### Q: On a system that is low on refrigerant, what's the best way to find the leak?

Finding and fixing a leak the same day is the preferred solution. A refrigerant leak is much like an active crime scene. Just like on TV, don't disrupt the evidence. Start by checking the usual suspects (service valves, field connections) before attaching your gauges. Ask the witnesses (your homeowner) if it's the first time this has happened. Does the system leak more during the winter (low side) or the summer (high side)? How much refrigerant is left in it? If any, recover it with a clean cylinder down to 20 psi vapor and then charge it back up to 450 psi of nitrogen and get to work.

If you use bubbles first, make sure the

ingredients do not react with your electronic leak detector. Get used to how your detector works before you need it. Remember, some condensers use double-row condenser coils and you may have to take the top off to use the bubbles and pinpoint the location. The goal is a systematic process to rule out suspects.

A proposed best- and worst-case scenario for labor charges could be an option for your homeowner before starting the work. Remember, assumptions are not your friend, and all equipment is innocent (leak-free) until proven guilty (pics of a bubble). Happy Hunting!
