

Up To Date

AC Shortages

Carrier's launch of the new 2023 compliant air conditioners has been delayed until October and this will result in many equipment shortages. Please call for availability before making any commitments to your homeowners.

CFAD Financing

Carrier continues to offer special financing for Factory Authorized Dealers. Through August 31, registered dealers can offer "No Interest if paid in full within 12 months with regular monthly payments" with zero cost to the dealer or "0% APR with 36 equal monthly payments" with dealer cost of only 5%.

LS-3/8X1-1/8X3/4X50

Due to an ordering error, there is an abundance of 1-1/8 linesets with the old-style foam insulation that are being sold at a deep discount.

Heat Pumps (5 videos)

The Carrier 38MARBQ heat pump which can be paired with a gas furnace

Additional Minisplit Hybrid Systems

Pairing a minisplit heat pump condensing unit with a gas furnace and evaporator coil can provide you and the homeowner a lot of benefits. Generally more available than traditional heat pumps, this system also gives the homeowner an inverter compressor and lower sound levels in a small cabinet. This system that was introduced a few years ago has now been expanded to include 4 and 5-ton ratings!

The table below shows some of the best matchups for this market. The numbers show the SEER / EER / HSPF ratings for 1 through 3 tons and the new SEER2 / EER2 / HSPF2 ratings for 4 and 5 tons. Remember, each system also requires the KSAIC0301230 interface kit, a piping adapter, a SPDT relay and a lineset with insulation on both tubes. See page 7.9 of your price pages for more details.

Featured Products

Indoor air purification and filtration is of top concern for many Bay Area homeowners. Finding a solution that you can confidently stand behind is critical. Thankfully, the Air Knight IPG air purification system utilizes dual technologies to reduce dust, dander, sub-micron particles, odors, air pollutants, VOCs, smoke and viruses in the home.

While all the various UV style air purifiers look the same, they're not. Air Knight is the only manufacturer with a dual frequency UV lamp and 8-10 times more catalyst surface area for the photocatalytic process. To come close to the technology of Air Knight, other systems would need a separate H2O2 generator. Air Knight is the only solution that combines multiple technologies to offer a best-in-class, active air purification system. Air Knight is UL rated and has a 7 year warranty on the power supply.

Be sure to offer Air Knight on your upcoming installations and service calls.

For more than four decades, Fantech has been researching, designing and bringing to market "Ventilation Solutions" that ensure better indoor air quality in the buildings where we work and live.

Sigler Wholesale Distributors has inventory of inline booster fans and energy recovery ventilators for your residential projects. If you're working on commercial projects, Fantech has larger CFM fans such as inline centrifugal fans, exterior mounted centrifugal fans, multi-port centrifugal fans and air curtains. Many items that can be easily crossed on a competitive specification.

Whatever your fan needs, talk to Sigler Wholesale Distributors about Fantech.

Technical Tips

Q: How can I tell when an electrical circuit is bad?

One easy way is by using your meter to check electrical resistance. Frequently checking circuits that are working properly will help you better identify a bad circuit.

Different multimeters give different results, so it's important to be mindful of the range setting for your auto-ranging meter. Continuity checks of your meter leads should be performed regularly. If there is any resistance through the leads it should be subtracted from the tested circuit resistance.

Thermistors sense temperature using resistance. Using NTC thermistors as

an example, when the temperature increases the resistance decreases. If your meter reading does not match the thermistor chart, you may have a failed thermistor or faulty connection.

Electrical devices ranging from big compressor windings to a little 24-volt contactor coil follow the same law. A lower resistance results in higher current which blows fuses and heats up the wires and connectors. Resistance to ground is generally game over. Some tools are designed to test motor insulation and can indicate a false path to ground reading. This is especially true when dealing with a flooded compressor.
