Community Candy Bar Fundraiser

Autism Spectrum Disorder (ASD) is a complex neurodevelopmental condition that affects a person's communication, behavior, and social interaction. It is a lifelong condition that can manifest in a wide range of ways, from mild to severe.

Individuals with ASD may experience delayed speech and language development, difficulty with social interactions, repetitive behaviors or routines, sensory sensitivities, and challenges with understanding nonverbal cues. These symptoms can vary greatly from person to person, making it important to recognize the diversity within the autism spectrum. It is estimated that 1 in every 36 children in America have ASD.

There is no single cause of ASD, and it is believed to be a combination of genetic and environmental factors. While the exact causes remain a subject of ongoing research, it is not a choice or a result of poor parenting.

There are many organizations in the Bay Area that help families with children who

have ASD. Nationally, Autism Speaks is a leading autism organization that works to raise awareness, fund research, and advocate for autistic individuals and their families. They offer resources for diagnosis, support groups, and information on navigating daily life.

ASD has touched the lives of several employees working at Sigler Wholesale Distributors. As part of our annual community fundraiser in Concord, San Jose, Santa Rosa and South San Francisco, we will be selling See's chocolate bars. Thanks to a generous donation by Sigler Wholesale Distributors, 100% of your purchase will go directly to Autism Speaks. Milk chocolate and dark chocolate candy bars are for sale at \$3 each or 2 for \$5.

Not all charities are the same, but according to Charity Navigator, Autism Speaks scores 100% and is considered a four-star charity. For more information about ASD or how you can help create a more inclusive and accepting society for individuals with ASD, check out www.autismspeaks.org.

Carrier CliMate App

The Carrier CliMate App allows WiFi control connectivity with select Carrier Ductless systems via a Smartphone or Tablet. The Carrier CliMate App can be used to control an individual system or multiple systems within a home, office, multifamily complex, commercial building, etc.

If you've used the first version of this app, it's worth another look. There are several improvements and new additions like geofencing make it a great control option for ductless systems. Standard on the Infinity high wall (40MPH) products, here are the accessories for other models...

The app can be downloaded from the Apple App Store or Google Play.

JB Industries is the premier manufacturer of American made HVAC/R tools and instruments. For over 50 years, JB has been committed to providing exceptional customer service and quality. Their innovative products meet industry needs and are manufactured, engineered and tested in accordance with rigid quality standards.

Three JB products that are "Just Better" are the F6-BOOST recovery machine, DS-250 digital scale and DM4-RW wireless digital manifold. Especially as we head into a world of A2L refrigerants, you'll want to check out the full assortment of manifolds, pumps, gauges, tube bender kits and more that are in stock at Sigler Wholesale Distributors.

Technical Tips

Q: What do I need to remember when diagnosing and replacing a compressor?

When you need to replace a failed compressor, it is best to replace the run capacitor, start kit, contactor, filter/dryer, and compressor plug at the same time. However, there are some other procedures that should be done to ensure that the new compressor lasts. Main contributors to compressor failure are mechanical failure and acid burnout. Determining what may have caused the original failure is important.

Is there acid in the system? Moisture in the system will mix with the POE oil and create an acid. Typically, acid in the system will smell bad, so if you notice an unusually bad smell when connecting your hoses, you most likely

have acid in the system. Using an acid test kit is the best method to check for acid in a system. If present, you will then need to flush the system with an acid flush before replacing the compressor, TXV and accumulator.

Did the compressor overheat and mechanically fail? Low airflow through the coils will cause excessive heat and poor oil lubrication. Once you have the compressor removed, give it a shake. If it sounds like there are marbles inside, blow nitrogen through the suction service valve so any metal debris may have fallen into the suction line will be blown out before the new compressor is in place.
