27VPA9: Sales, Install and Service

The new Performance Series 27VPA9 heat pump

Variable Speed Innovation with the 27VPA9

Carrier has officially elevated its mid-tier lineup with the Performance Series 27VPA9 variable-speed heat pump. Engineered to broaden homeowner access to high-efficiency technology, this breakthrough system gives you a powerful new solution to drive sales. The 27VPA9 stands out as a fully certified variable-speed unit utilizing native controls in accordance with the Department of Energy's Controls Verification Procedure. Remarkably versatile, it delivers true variable-speed performance and energy-efficient comfort with a standard two-stage thermostat.

The 27VPA9 is built around an advanced variable-speed rotary compressor operating across a 25% to 100% capacity range. This results in meticulous temperature control, enhanced dehumidification, and quiet performance with sound levels dropping as low as 57 dBA. It achieves up to 19.0 SEER2 and 10.0 HSPF2 ratings. For winter performance, it utilizes an Advanced Defrost algorithm that leverages specialized sensor technology to clear the outdoor coil only when necessary.

At the heart of the outdoor unit is a newly consolidated main circuit board that beautifully unifies the variable frequency drive, demand defrost, and IntelliSense technology into a single component. For your technician's safety, it is protected by a swinging high-voltage cover tray.

Even though the 27VPA9 works with any two-stage thermostat, by pairing the heat pump with an IntelliSense-enabled Carrier Smart Thermostat, you unlock the patent-pending ComfortAdjust feature, which expands the system from 5 to 21 adaptable stages and unparalleled indoor setpoint accuracy. More importantly for your technicians, this connected setup transmits over 125 specific-source fault codes straight to the Connected Portal and Service Tech app.

The first shipments are expected to arrive later this month. Product data and installation instructions are posted on HVACpartners and AHRI ratings are included with your most recent combo/ratings tool from Sigler Wholesale Distributors. Reach out to your territory manager today to place a pre-order!

Featured Products

When it is 95° outside, a homeowner needs air conditioning. On those peak days, a Carrier system is the best way to keep everyone in the home cool and comfortable. However, what about those 80 degree days or warm days that are followed by a cool evening? Those are situations where a whole house fan shines and why QuietCool needs to be part of your selling process.

An added benefit that is especially important these days is the fan's ability to circulate air and introduce a large volume of fresh outside air into a home. When people are focused on keeping the air in their homes fresh and clean, nothing works better than Quiet Cool. Both PSC and ECM motor models are available with wireless controls to help ensure a quicker installation and higher profit jobs.

Southwark Metal Manufacturing Company has provided prefabricated sheet metal ducts and fittings for over 70 years. As a third generation, family-owned company, they are committed to providing the HVAC industry with the finest quality products. Sigler Wholesale Distributors is proud to partner with Southwark for all of our sheet metal products.

Southwark was founded in 1946 by Samuel Blank in Pennsylvania. From their humble beginning in the Southwark neighborhood of South Philadelphia, they have grown to become one of the largest sheet metal duct manufacturers in the United States with seven state-of-the-art manufacturing facilities.

Technical Tips

Q: What is the new KSACN1701AAA thermostat?

Carrier has introduced a new wall control for mini split and crossover air handler units. It is more in-line with the look and feel expected by homeowners and is an exciting shift from the industrial look of other mini split wall controls. The new KSACN1701AAA features a large 4-inch touchscreen display and several advanced features like built-in motion sensing, a humidity sensor, three speed fan control, over-the-air software updates, and Wi-Fi access via the Carrier CliMate app.

This communicating wall control is also CVP compliant which ensures the ratings reflect real-world operation. This is accomplished via a two-wire

direct connection using the HA/HB terminals. Even though other mini split products have those terminals, this setup is only available for the mini split 45MBAA air handler and crossover 45MUAA and 45MUHA air handlers. Note that 18 gauge shielded and stranded wire is required. This new control can be used with other mini split products as well, but this setup requires a 24V interface kit.

Note that the KSACN1701AAA is available now but will be transitioning to the KSACN1701BAA. They are identical, but the newer models will have unique serial number labels to aid in warranty processing.
